Yellow duck compromises competition

The latest updates

Just off the border of a town called Shoulden a massive yellow duck has invaded in the mince of a high-stakes fishing competition hosted by the mayor of Kent and is claiming he has won”

A witness states “It just kind of fell, and started chanting that it was the winner”.

Police arrived at the scene moments later but just stood in disbelief. We have yet to get a comment from the Dover district council as they are “trying to figure out what it is”... The locals have taken to much liking of the newfound plastic friend but others are in protest to get it gone.

Organisers are contemplating whether or not to cancel but as said above, nobody really knows.

Bleeding Diseases

The latest updates to get you through the day

A novel haemorrhagic virus has recently surfaced in Ramsgate, presenting as a new form of bleeding disease. The handling of individuals afflicted with the virus requires the use of hazmat suits due to its highly contagious nature, a rare occurrence in Africa.

The virus is believed to have originated from animals, specifically bats, rats, and spiders, serving as reservoir hosts. There is a concern that this virus may lead to a significant outbreak in the UK.

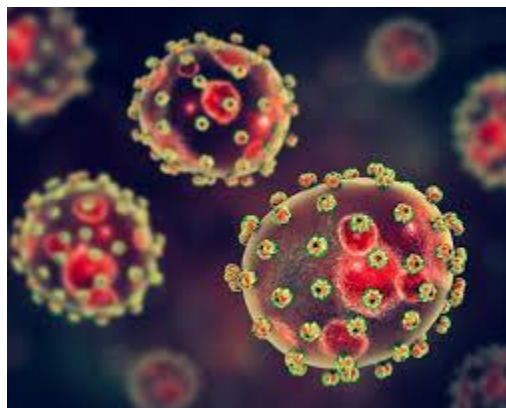

It has been suggested that an individual may have transmitted the virus while traveling to the UK, potentially leading to its spread among all passengers aboard the plane and subsequently throughout the UK.

A previous incident in which a patient carrying a similar virus landed in New York prompted the shutdown of the entire city.

Experts have compared the severity of this haemorrhagic virus to that of COVID-19, stating that it is approximately 50 times more severe. While COVID-19 had a mortality rate of 2 percent, the new haemorrhagic virus is believed to present an almost certain fatality rate.

The initial symptoms encompass muscle and joint pains, internal bleeding, and fevers. The hemorrhagic virus is exceptionally contagious. It is imperative to don full personal protective equipment (PPE) when encountering a patient, as the virus is airborne.

The government is collaborating with third-party entities to identify and monitor all confirmed cases in order to promptly and effectively administer treatment, thereby mitigating the escalation of fatalities.

Bees Under Seige

The latest updates to get you through the day

The global decline in bee populations, loss of habitats, and shifting climate patterns raise concerns regarding governmental response.

Recent research indicates that while individual pesticides may offer agricultural benefits, their combined use can serve as neurotoxins, profoundly altering bee behaviour.

Bees are unable to detect whether or not there is a pesticide presence in nectar, demonstrating substantial exposure. Up to 90% of pollen and stream samples collected across the UK revealed pesticide contamination.

Asian hornets are experiencing an increase in size in the southern region of England. This escalation is of significant concern due to the inability of honey bees and Asian hornets to coexist.

A local secondary school biology teacher with 25 years of experience under his belt at St Lawrence College in Ramsgate is attempting to bring awareness to the bee crisis by merging it into day-to-day school life.

Beekeeping makes you live longer according to 3rd party sources which may entice new comers to join the bee industry as well as improves your mental health massivly

Are the government going to investagatue? Will they bring in new legislation?

Royal Trouble!

The latest updates to get you through the day

The royal family has been reviewing their succession plan to determine the next in line. One member of the royal family who has emerged as a potential successor is Prince Michael of Kent, who has a long family history. However, there are doubts about his identity as he may not be the person we believe him to be.

He was born in a hospital near London His name is also Michal and he was placed right next to the prince.

His name is also Michal and he was placed right next to the prince we all know. The other Michal is a math teacher at St. Lawrence College and goes by the name Mr. Thompson.

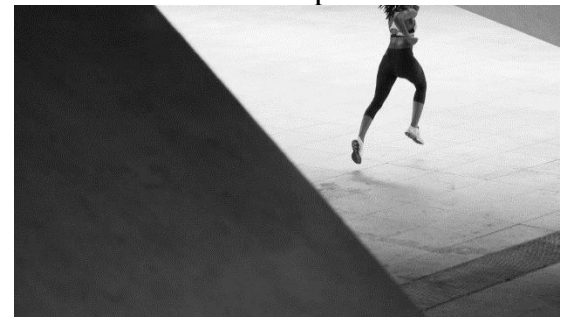

This very humble math teacher could actually be a prince and may have been missing out on all this fame and glory for many years, but would he want it in the first place? Mr. Thompson has been asked to do a DNA test, but no awnser.

Beavers situation deteriorating

The latest updates

The population of beavers is experiencing a decline attributed to an increase in poaching activities. Research conducted by the National Zoo has uncovered tht beavers are being targeted for their pelts, resulting in a substantial reduction in their population. This has further led to the dismantling of their constructed dams, causing the unimpeded flow of numerous rivers. Measures are actively being pursued to tackle this issue through the establishment of dedicated nature reserves aimed to help overall

A school armoury has been broken in to overnight in the basement of the school in between the bursary and library. The armoury is an alarmed room with reinforced walls an armoured door motion detectors.

The heist took place at 2.33 this morning, they used a series of smugglers tunnels then they broke through the floor using a breaching charge so they must be experienced so possibly trained by the military then they used a plasma cutter to cut out the stolen goods they were quick as it took 10 minutes. They used a trolley system to take the weapons from the vault to a nearby vehicle. "The school was chosen because it is a pretty low security area". A 10 large calibre rifle, 10 shotguns and 27 cadet semi-automatic cadet rifles were stolen. The rifles are about £500 the shotguns were valued between £200 - £2000. The motion detectors instantly picked them up so nobody had rigged the system. One was armoured, they all had night vision goggles. Suspects were dressed in military clothing, they didn't steal any ammunition because the ammunition wasn't stored with the guns. "they need to think seriously about what they have done because it is a breach of trust and can be very dangerous so they should hand them back as soon as possible".

The scoop of the day

The latest updates

To expand the league and it was boring on earth so they are holding it on the moon you can't go and watch it on the moon but it will be on live television there's a big indoor stadium on the moon so the ball doesn't flow away. The moons been being risk assessed for 5 years and they believe it will be safe. They have been giving the materials up to the space station for 5 years and they are going to build it up there. The gravity level in the stadium will be the same as earth and they are going to have realistic grass so they will still wear football boots.

The latest breaking news of the day

The latest updates to get you through the day

Brown beats Tatum for NBA final MVP, Jason had an average of 22 points per match and brown scored 20.8 points on average but Brown won the MVP, how? Tatum also had a higher rebound average at 7.8 whereas Brown only had 5.4.

The main thing which put Jaylen Brown ahead of Jason Tatum as Jaylen brown had 1.6 steals average but Jason only had 1.1 steal average. But many fans opinions is that Jason Tatum should have won.
